

Certificate in Sustainability for Finance.

About this course

As organisations are rebuilding from the pandemic, there is a growing desire for a transformative and sustainable global recovery. Accountants and finance professionals have an important part to play in helping organisations adapt to the sustainable practices required to prevent resource depletion, facilitate long term success, and build a more sustainable future. Give your team the knowledge and tools they need to adapt and succeed – and be future ready.

Learning outcomes

- Explain why sustainability is important to society, to organisations, and to finance professionals
- Evaluate business value chains, business models and business practices for sustainability and related issues
- Define climate change risks and the associated financial implications, and understand the reporting frameworks for climate risk disclosures
- Explain the UN SDGs, their significance for organisations in terms of risks and opportunities and the definitions of impact
- Explain why ESG issues are important for your organisation and evaluate processes and systems for collecting, analysing and reporting ESG information
- Explain why sustainability analytics is important for your organisation and evaluate the approach for compiling, analysing and interpreting ESG data.
